

## Ideation Phase

### Define the Problem Statements

|               |                                     |
|---------------|-------------------------------------|
| Date          | 01 July 2025                        |
| Team ID       | 23A51A4222                          |
| Project Name  | Leave Approval Sysytem (ServiceNow) |
| Maximum Marks | 2 Marks                             |

#### Problem Statement:

Many organizations still manage employee leave requests manually through emails, paper forms, or phone calls. This process is time-consuming, prone to errors, lacks transparency, and makes it difficult to track leave records. Managers may miss requests, employees may not know the status of their applications, and maintaining accurate leave history becomes challenging.

To overcome these issues, a Leave Approval System will be developed using ServiceNow. The system will allow employees to submit leave requests by selecting the leave type and leave dates. It will automatically validate the dates, route requests to the appropriate manager using Flow Designer, and notify employees whether their request has been approved or rejected. This automation improves efficiency, accuracy, and transparency in the leave management process.
